WATER POLLUTION CONTROL RESEARCH SERIES

The Water Pollution Control Research Series describes the results and progress in the control and abatement of pollution in our Nation's waters. They provide a central source of information on the research, development, and demonstration activities in the water research program of the Environmental Protection Agency, through in-house research and grants and contracts with Federal, state, and local agencies, research institutions, and industrial organizations.

Inquiries pertaining to Water Pollution Control Research Reports should be directed to the Chief, Publications Branch (Water), Research Information Division, R&M, Environmental Protection Agency, Washington, D. C. 20460

EPA Review Notice

This report has been reviewed by the Environmental Protection Agency and approved for publication. Approval does not signify that the contents necessarily reflect the views and policies of the Environmental Protection Agency, nor does mention of trade names or commercial products constitute endorsement or recommendation for use.

PREFACE

Volume II of the report, "Literature Search and Critical Analysis of Biological Trickling Filter Studies," consists of the bibliography of the references cited in Volume I in alphabetical sequence. Wherever possible, either the Chemical Abstract or Water Pollution Abstract reference is also given; if both were available, the Chemical Abstract reference was preferred.

The alphabetical sequence is based upon the surname of the author; if more than one author is listed, the name of the first author determined the position in the bibliography; if two or more authors had the same surname, the alphabetical sequence of the first (Christian) names determined the relative position. The Christian name of some of the authors was not published, and is reported that way. If an author published more than one paper, the references are arranged chronologically under the author.

A considerable number of anonymous articles was published; these articles are listed after the alphabetical author sequence, according to the alphabetical sequence of the journal, and chronologically within the journal. Some of these articles are key publications and are frequently referred to in Volume I of this report. For example, the pamphlet "Sewage Treatment Plant Design," reference 4916, was prepared by a Joint Committee of the American Society of Civil Engineer and the Water Pollution Control Federation. It is also the "ASCE - Manuals of Engineering Practice - No. 36," and, "WPCF - Manual of Practice - No. 8."

The older literature created considerable confusion. During the evolution and growth of a journal, changes in journal title, volume numbers, and style of reporting authors created problems which we tried to minimize by duplicating the reference as originally published. As a consequence, errors in spelling the name of an author, or the literal translation of a foreign name, were included as it appeared in the journal or abstract, e.g., Stroganoff, Stroganov and Stroganow (references 4253, 4254, and 4255) appear to be the same author, but are spelled differently in the journals. In this review, they are treated as three different authors.

The journal abbreviations are those recommended by the Chemical Abstracts, specifically those in, "Access, Key to the Source" of the Chemical Sciences, 1969 Edition, published by the American Chemical Society.
